

NOTICE OF WATER SYSTEM CHLORINATION Beaver Falls Waterworks District

Dear Resident,

Please be advised that the Beaver Falls Waterworks District will be conducting its annual scheduled preventative maintenance program on our community infrastructure.

Key Details

- **Chlorination & Flushing Period:** October 20 to November 3, 2026
 - **Water Supply Interruption: None.** There should be no interruption to your main water supply during this timeframe.
-

Why is this maintenance being completed?

Flushing water mains and treating the system is a vital preventative process to improve and protect our community's water quality. This routine maintenance helps to:

- **Remove sediment** that gradually deposits inside the distribution pipes over time.
 - **Reduce bacteriological growth** and actively control pipe corrosion.
-

What should you expect at your tap?

During this multi-day maintenance period, you may notice a slight **taste and smell of chlorine** in your tap water. Please note that we only add enough chlorine to the water to ensure it remains safe for use.

- **Quick Tip:** You can easily eliminate the chlorine taste by filling a jug or container with tap water and keeping it uncovered in the refrigerator overnight. Much of the chlorine will dissipate naturally out of the water while it sits.
-

Questions or Concerns?

If you have any questions regarding the maintenance schedule or your water service, please reach out to our administration team:

- **Phone:** 250-367-0255
- **Email:** beaverfallswaterworks@gmail.com

Thank you for your cooperation and understanding while this vital annual maintenance is completed to keep our water safe and high-quality.
